

Tip for using PS4 steering wheels in ASSETTO CORSA COMPETIZIONE - PS4 (Version: 1.3.7)

By default, when you launch the game for the first time, the steering wheel axes (steering and pedals) are sometimes not functional.

To fix this issue, keep the steering wheel in PS4 mode, and launch the game using your wheel.

Use your wheel buttons (do not use the DualShock gamepad) to navigate within the menus:

1) Go to OPTIONS / CONTROLS.

2) Select STEERING WHEEL (the option must be highlighted in red).

3) Select Reset Bindings (with the wheel's Triangle button), then select CONFIRM.

Check out the screenshots below.
